Copy 2 of 3
1 April 1963

MEMORANDUM FOR: Chief, Contracts Division, OSA

ATTENTION :

[REDACTED]

SUBJECT : EOP LAC - 150

1. Basic proposal is straight forward acceptance procedure for equipment. Four items exist which can alter the letter of the proposal but not the intent. These items are:

a. [REDACTED] will time-share such that receiver will not be completely and continuously blocked.

b. The number of channels will be limited to 29 channels for the specific purpose of "easier recognition of full sampling cycle."

c. Channel designation and input parameters will be respecified at a later date to provide functional data without redundancy.

d. The "black-box" is being reworked to conform with dimensions required for physically mounting the item in the designated space, and for operating through a stringent and specified EMI environment at the receiver site.

2. As completion date is not specified in the EOP, the only items indicative of exception to the proposal are items (a) and (c). Item (a) refers to operational description (paragraph 2, page 2) and does not change the intent. Item (c), however, can change the intent and thus is an exception. EOP

3. It is requested that although the channel designations (paragraph 3, page 2) and the channel inputs (described on page 4) can remain the same during acceptance checkout, that a formal commitment on channel inputs and indicating parameters be waived until further study can prepare suitable listing.
